
BASICS

Exercise 1

Playing any double or triple stop, move the hand around while keeping the fingers in tune on the notes.

Even if there seems to be little movement possible, see how you can 'give' even just a fraction more in each joint. Afterwards, even the slightest extra freedom in the hand that you have gained feels enormous when you return to normal playing.

- Pull the knuckles out, away from the neck of the violin, so that the fingers lengthen slightly, all the time keeping the notes in tune – or as in tune as possible.
- Pull the hand in, as though trying to touch the neck of the violin with the knuckles.
- Pull the hand back, as though to flatten the notes, but keeping the fingers in tune.
- Push the hand forward, as though to sharpen the notes, but keeping the fingers in tune.
- Move the hand in circles, clockwise and anticlockwise, 'giving' in every joint and allowing every possible movement, however slight it is.

Exercise 2

- To gain more feeling of lightness and instantaneous adjustability, move the fingers above and below the correct tuning.

The arrows represent moving the finger a quarter-tone lower or higher. Where there is no arrow, play the double stop in tune:

Slow

The image shows two staves of musical notation for Exercise 2. The first staff is labeled 'Slow' and contains two measures of double stops. The first measure has a '1' above the first note and an upward arrow above the second note. The second measure has a '3' below the first note and downward arrows above the second and third notes. The second staff is similar, starting with a '2' above the first note and an upward arrow above the second note, followed by a '4' below the first note and downward arrows above the second and third notes. Both staves end with 'etc.'.

- When the arrow is above the stave, the lower finger does not move, and *vice versa*. When there are two arrows, move both fingers at the same time.

Fourths

Few violinists practise perfect fourths, perhaps because few scale books include them; yet they are a powerful tool for shaping the intonation of the entire hand.

Perfect fourths appear frequently in chord-playing, so the more used you are to playing them the less there is to practise when you play, say, unaccompanied Bach.

Once you get exercises in fourths well in tune, or play them in scales and broken thirds, they improve not only your feel for other double stops, but for ordinary single notes as well:

The image shows a musical staff with two measures of perfect fourths. The first measure has four pairs of notes: (1, 2), (2, 3), (3, 4), and (0, 1). The second measure has four pairs: (1, 2), (2, 3), (3, 4), and (1, 2). The notes are on a treble clef staff. The first measure ends with 'etc.'.

Broken fourths are particularly helpful in training the hand position so that the fingers do not lift too high but stay near the string; and in learning all the different tone-semitone patterns of the four fingers:

The image shows a musical staff with two measures of broken fourths. The first measure has four pairs of notes: (1, 3), (1, 3), (1, 3), and (1, 3). The second measure has four pairs: (1, 3), (1, 3), (1, 3), and (1, 3). The notes are on a treble clef staff. The first measure ends with 'etc.'.
